

## Help! I received an error message not described here or in the help files when using AGWA.

Posted by isburns - 2007/11/03 23:16

---

First, make sure that any tables involved in the process, including the watershed and stream attribute tables, contain the correct values (i.e., no null records, WS# or STREAM# = 0, improper stream sequencing, etc.). If you locate an error in an AGWA-generated table, try rebuilding the table by either recreating the watershed or performing the task again. In some instances, it might be necessary to completely rebuild the project to correct a corrupted ArcView project. If the error continues to occur, contact AGWA technical support ([agwa@tucson.ars.ag.gov](mailto:agwa@tucson.ars.ag.gov)). Please provide the following information: the exact error message received, the task being performed, the type of watershed (KINEROS, SWAT, buffered, etc.), the type of inputs used and any other relevant information that could aid in the timely resolution of the problem. Please do not send datasets unless asked to do so.
